(54) Title: VISUAL DISPLAY WALL MOUNTING APPARATUS

(57) Abstract: The present invention is a cost effective wall mounting apparatus for a visual display. The wall mounting apparatus comprises two interlocking plates that are configured to mount the visual display to a wall such that the bracketry provides a gap between the wall and the visual display of less than about 2 inches. One of the plates is designed to be attached to the wall, while the other is affixed to the back of the visual display. The visual display is mounted to the wall by hooking the two plates together, such that the two interlocking plates contact each other in at least two places along the surfaces thereof.
